

# Computing Translation Posters

## Task A: Find the correct translation

- Pick at least **five** words you about **Computing** eg. keyboard, motherboard, website
- Find the word in **another language** taught at your school eg. French, Spanish, German or if you speak a second language you could choose that one
- You will need to use an **online translator** such as Google Translate to check you have the correct translation. Translate from English to the language **then back again** to check it is still the same word!
- Type the word and translation into a Word processed document - do not format it to make it look nice!

## Task B: Creating the posters

- Create an **A4 poster** for each word (you could use presentation/DTP software)
- Each poster should be on its own slide/page
- Each poster should include **at least**:
  - The word in the other language in **large writing**
  - The word in English in **smaller text**
  - An **image** of the word you are describing
  - A **flag** to represent the country the word is mainly used

## Task C: Extensions

- You could research how to create a **master slide** and then use the same layout each time
- If you are allowed headphones you could listen to the pronunciation and practice saying it to a peer
