

# CHRISTMAS ADOBE PHOTOSHOP CC ANIMATION CRIB SHEET

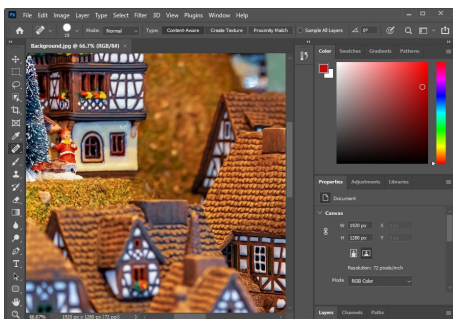

This sheet is to help you create a **frame animation** (every layer in your document will become a frame in your animation)

**SKILLS NEEDED** You need to be able to create layers with different text and images on them as well as use layer styles to make them look nice!

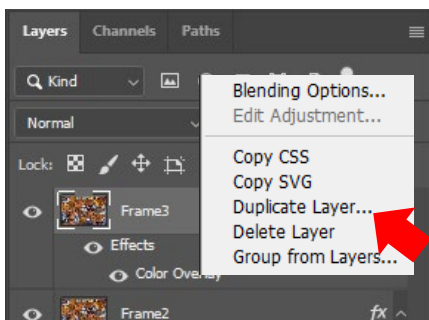

## STEP 1

Either create your first layer or open an image and make it a layer then rename to **Frame 1**

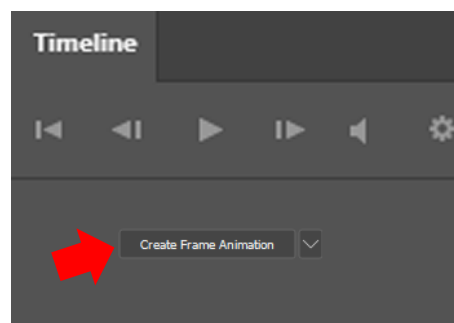

## STEP 2

Make each layer (duplicate the layers if you are repeating something and rename each one e.g. Frame 2, 3 etc.)

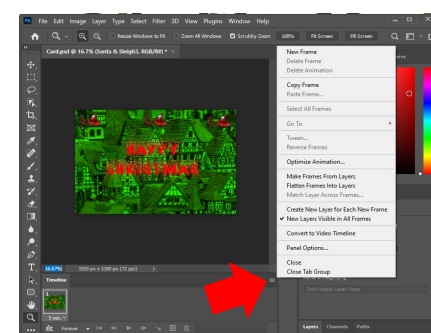

## STEP 3

Open the **Timeline Panel** from the **Window** at the top of Adobe Photoshop CC and choose **Create Frame Animation**

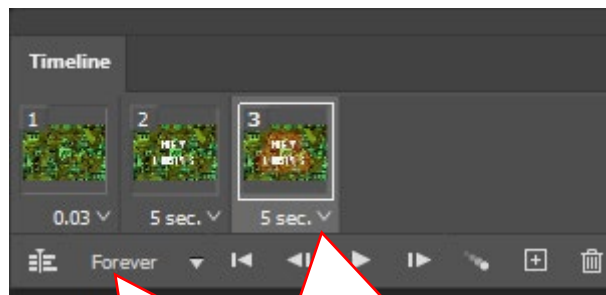

## STEP 4

Click on the **burger menu** and choose the option **Make Frames From Layers**

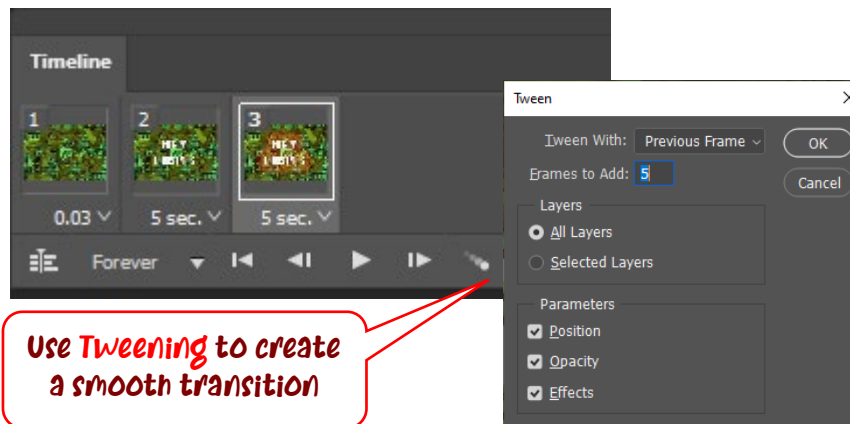

## CUSTOMISING YOUR ANIMATION

Change how many times it repeats

You can change how long each frame lasts...

Use Tweening to create a smooth transition

## SAVING
