

CHRISTMAS QUIZ

Here's how to write a question...

```
#Question1

q1count=0

while q1count<2:

    q1=input("Where does Santa Claus live?")

    if q1=="North Pole":

        print("That's correct! You have 1 point!")

        score=score+1

        break

    else:

        print("No that's not correct, you lose a point from your total!")

        q1count=q1count+1

        score=score-1

    print("Number of attempts at Question 1 so far: ",q1count)
```

Add-ons

```
#Delay module
import time

Allows you to import modules into Your program

This one lets you create a delay effect

#Scoring
score=0

Create a variable to store the score

Set to 0 so it's a fair game!

#Welcome
print("Please wait! Quiz loading!")
time.sleep(1)

How to use the time module to create a delay

Add a welcome message

How many seconds you want the delay to be

#End of the quiz
print("Final Score:",score,"points!")

Shows the total score that's been stored in the variable

Some text to introduce the score

What is printed after the score
```
