

STEP 1 – GETTING TO THE CORRECT PART OF DREAMWEAVER

- Open Adobe Dreamweaver CC 2018 and choose **Site** then **New Site**

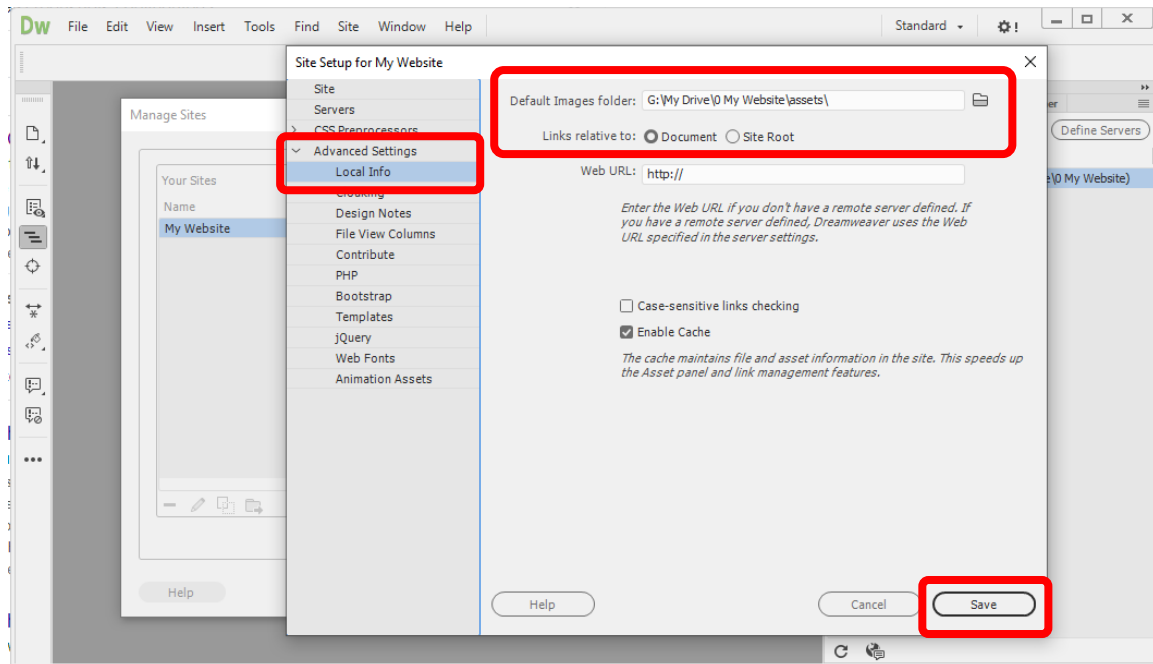

STEP 2 – TELLING DREAMWEAVER WHERE YOUR WEBSITE WILL BE SAVED

- If you have not made a folder for your website and a folder inside that called **assets**, do this now!
- Type a **Site Name** (name for your website) and a **Local Site folder** (where your website will be saved)
- Do not press save yet – go to Step 3!

STEP 3 – TELLING DREAMWEAVER WHERE YOUR IMAGES WILL BE SAVED

- To keep your website organised, create a folder called assets to store images, videos and audio files
- Go to the **Advanced Settings** section and click on **Local Info**
- Click on the folder next to the **Default Images folder** section and find your assets folder
- Make sure **Document** is selected in the **Links relative to** section then press the **Save** button

It's best to choose Document under the Links relative to as document-relative paths as your website is 'local' and your HTML files and assets are in the same folder and should remain together.
